AEVON H4 · STUDENT PLANNER WEBSITE

StudyPilot

Your study engine for real student time.

Plan smarter. Stay locked in.

01 · THE PROBLEM

College planning is a time game

The hard part is not knowing what matters. It is finding the right hour to act.

01 Everything competes for the same hours

Deadlines, syllabus topics, and real life collide in one calendar.

02 The right study window disappears

Students often miss the moment to start until pressure spikes.

03 The gap is a planning cockpit

StudyPilot brings the moving parts into one focused place.

02 · THE SOLUTION

One dashboard.
Zero deadline surprises.

StudyPilot connects the student's timetable, syllabus, and deadlines into one daily view.

—

A single study engine turns scattered planning into the next clear move.

03 · WHO IT IS FOR

Built for students with full calendars

StudyPilot is for college students balancing multiple courses, commitments, and changing priorities.

Multiple courses

Keep every syllabus and exam in view.

Real commitments

Plan around work, commute, sleep, and breaks.

04 · THE BUILD

Technology that keeps the planner lightweight

Final stack status: **proposed**. The architecture is designed for a responsive, student-controlled web experience.

Frontend

React-based responsive web interface.

Backend

Node.js / Express services for schedules and reminders.

Data

Firebase or SQLite for planner records.

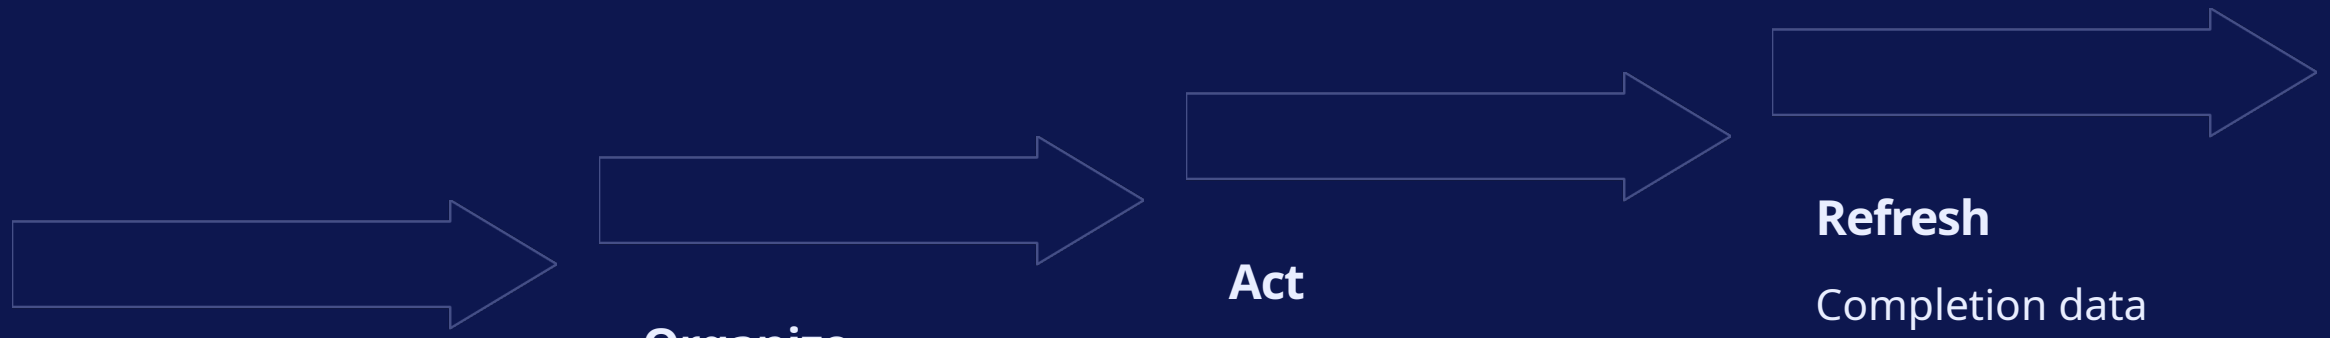

Tools

Browser notifications and Figma for interface design.

05 · HOW IT WORKS

From scattered inputs to a next-best study move

A simple feedback loop keeps the plan current as the student's day changes.

Capture

Student enters timetable, syllabus topics, exam dates, and assignment deadlines.

Organize

Prioritize work against available hours, urgency, and time left.

Act

See today's plan, countdowns, reminders, and progress in one dashboard.

Refresh

Completion data updates the next study recommendation.

06 · KEY FEATURES

Make the right hour count

Exam awareness

Add dates, attach a syllabus, and receive real-time countdown updates.

Smart ordering

Prioritize by urgency, difficulty, and time left.

Right-sized blocks

Fit tasks to the student's real day, not an idealized schedule.

Availability view

Surface open hours after classes, commute, work, sleep, and breaks.

07 · AI POLICY

AI can assist the build.
The student stays in control.

StudyPilot's baseline planner is rule-based, transparent, and independent of institute ERP-LMS systems.

Baseline core

The planner works without an AI tool.

Separate disclosure

Any AI-assisted prototyping or content generation is disclosed in the final demo.

Student-controlled

The plan remains personal, practical, and user-directed.

08 · OUTPUT

The demo makes progress visible

Working website flow: timetable, syllabus tracker, exam countdown, available-hours view, and progress dashboard.

EXAM COUNTDOWN

12 days

Biology · 6 topics left

AVAILABLE HOURS

3h 20m

After classes + commute

Illustrative progress data · switch between a last-week pulse and a last-month trend.

StudyPilot is not an ERP-LMS of any educational institute.

AEVON H4 · FINAL TAKEAWAY

Less tab-hopping. More “locked in.”

StudyPilot keeps planning personal, practical, and built around real student time.

Future scope

Adaptive plans · peer study groups · resource recommendations · focus analytics
